e-con Systems foray's into manufacturing Services by completing design, development and Manufacturing of Information Exchange Unit.

Chennai, June 2nd, 2007

e-con Systems announces stepping into Manufacturing services after successful completion and deployment of Information Exchange Unit, for a US based customer in a record time of five Months. Facing huge challenge of getting the product out in market in time, It was the first assignment, where e-con took the responsibility of manufacturing and shipping the finished product (1000 No's in initial Lot), along with the design & development of the said IEU, to complete its cycle in End-to-End product development offering. e-con feels that adding manufacturing services in it's portfolio will increase customer's confidence in e-con systems as it eliminates the need to look for other low cost manufacturing destinations like China/Taiwan for mass manufacturing after completion of the design and competitive pricing can be achieved while doing the same in India.

The customer required PXA270 for its design and e-con was selected for its design of the [Sirius](#) reference platform which houses a PXA270 processor and ability to deliver a stable and a futuristic design, starting from the conceptual level.

"It is an immutable law in business that words are words, explanations are explanations, promises are promises but only performance is reality" e-con understand the same and hence delivers more than promised

In manufacturing Services offering, along with it's manufacturing partners in India, e-con helps it's customers to get the lowest possible BOM cost of the product, design iterations arising due to component availability and manufacturing constraints, test jig setup and test setup for remote monitoring.

About e-con Systems:

e-con Systems, an **Embedded Product Development Partner** based in Chennai India, offers World-class Design and Development services in Embedded Systems Domain viz. Wired/Wireless Networking, Consumer Appliances, Medical and Process Control Applications, Video streaming, Bio-metric security and Surveillance Applications etc. Primarily offering services as below:

Linux, WinCE/Windows Mobile and VxWorks Board Support Packages
Device Drivers for Windows, Linux, WinCE/Windows Mobile and VxWorks
Hardware design
PCB design
Board Bring up
Manufacturing support and Industrial design support.
